

Dharmik Dholariya

dharmikdholariya79@gmail.com | dharmik79.github.io | github.com/Dharmik79 | linkedin.com/in/dharmikdholariya | Ottawa, Canada

Technical Skills

Languages	JavaScript, TypeScript, Python, C++, SQL, Java
Backend & APIs	Node.js, Express, REST APIs, GraphQL, gRPC, WebSockets, OAuth2, JWT, OpenAPI (Swagger)
Frontend	React, Next.js, Redux Toolkit, React Native, Jest, Playwright, Tailwind CSS
Cloud Platforms	AWS (EKS, EC2, S3, RDS, Lambda, Glue, CloudWatch, IoT Core), Azure (Storage Queues, AKS), GCP
Databases	PostgreSQL, MongoDB, MySQL, Redis, DynamoDB, Elasticsearch
DevOps & Platform	Docker, Kubernetes, Terraform, GitHub Actions, ArgoCD, Nginx, OpenTelemetry, Prometheus, Grafana, Kibana
Data & Streaming	Spark, Kafka, Iceberg, Trino, Athena, dbt, Azure Data Explorer (ADX)
Agentic AI	LangChain, LangGraph, CrewAI, AutoGen, Strands SDK, Multi-Agent Orchestration, MCP (Model Context Protocol)
AI & ML	OpenAI API, Anthropic Claude API, Hugging Face Transformers, RAG, Prompt Engineering, LLM Fine-tuning (LoRA/QLoRA), Vector Databases (ChromaDB, Pinecone, Weaviate), scikit-learn
Security	CIEM, CSPM, CNAPP, SIEM, SOAR, IAM Policy Analysis, HashiCorp Vault, DevSecOps, RBAC, OWASP, Zero Trust, AWS IAM, Azure Entra ID

Experience

TrendAI

Senior Software Engineer

Ottawa, Canada
Jan 2026 – Present

- Took full technical ownership of the CIEM platform, defining multi-cloud entitlement strategy across AWS IAM, Azure Entra ID, and GCP IAM; drove adoption of zero-trust access principles across engineering teams.
- Led the design and rollout of an AI-powered threat detection pipeline using LangChain and OpenAI API, establishing LLM integration patterns and agent orchestration standards adopted by the broader security team.
- Identified and resolved platform-wide bottlenecks through Kubernetes HPA tuning and Prometheus/Grafana observability improvements, reducing response latency by **40%** and cutting mean time to recovery.
- Spearheaded the end-to-end migration strategy for critical ETL workloads to a lakehouse architecture on Apache Iceberg within a Spark Processing Cluster (SPC) environment; defined migration roadmap, coordinated cross-team execution, and ensured zero data loss and minimal downtime during cutover.
- Defined API contracts, system integration standards, and OpenTelemetry observability guidelines across teams; owned Terraform/CloudFormation infrastructure and standardized connectors for Fortinet, ProxySG, and Cisco Umbrella.
- Mentored junior engineers via structured code reviews and design discussions; introduced Jest/Playwright/PyTest quality gates that reduced production regressions across the platform.

Software Developer

Jul 2024 – Dec 2025

- Built backend REST APIs and IAM data ingestion pipelines for CIEM modules, processing cloud entitlement data from AWS, Azure, and GCP to surface over-privileged identities and policy misconfigurations.
- Implemented full-stack cybersecurity dashboards with Python, Node.js, React, Docker, and Kubernetes, enabling security analysts to visualize CIEM/CSPM findings and act on entitlement risks in real time.
- Owned and managed multiple mission-critical ETL pipelines processing high-volume security telemetry, ensuring data quality, pipeline uptime, schema consistency, and SLA compliance across all ingestion workflows.
- Led migration of legacy batch ETL workloads to a modern lakehouse architecture using Apache Iceberg and a Spark Processing Cluster (SPC) environment, improving query performance, enabling time-travel analytics, and reducing storage costs.
- Developed multi-TB ETL pipelines ingesting telemetry from S3, ADX, and on-prem sources via AWS Glue, PySpark, and Lambda; implemented schema evolution, partitioning strategies, and data validation logic within the SPC environment.
- Integrated vector-embedding-based anomaly detection using OpenAI APIs to automatically classify suspicious permission patterns and flag high-risk access events for analyst review.
- Developed event-driven log ingestion microservices on AWS EKS using RabbitMQ and Azure Queues; applied OWASP-aligned hardening and built multi-vendor connector support for Fortinet, ProxySG, and Cisco Umbrella.

Regina Residential Resource Centre

Software Developer

Remote, Canada
Jul 2023 – Jun 2024

- Designed and architected backend services and REST APIs using Node.js, Express, MongoDB, and AWS, supporting mission-critical features for 150+ active users.
- Implemented role-based access control (RBAC) and authentication workflows; designed data models across relational and non-relational databases for scalability and secure access.
- Improved performance by **25%** via Redis caching and reduced query time by **70%** through pagination and indexing optimizations; automated deployments with GitHub Actions CI/CD.

Refresh Inc
Software Developer

Remote, Canada
Sep 2022 – Sep 2023

- Built responsive cross-platform interfaces for web, Android, and iOS using React Native and TypeScript, ensuring consistent UI/UX across devices.
- Integrated REST APIs for authentication, data sync, and wellness features; managed Agile delivery with Trello and Bitbucket, improving release cadence.

Knovator Technologies
Software Developer

Surat, India
Apr 2021 – Feb 2022

- Developed the backend for a HIPAA-compliant healthcare platform using Node.js and MongoDB with PII encryption, masking, and strict role-based access controls.
- Integrated Vimeo SDK for video/call features and implemented OAuth-based authentication; optimized throughput with Redis caching and GitLab CI/CD deployments.

Education

University of Regina, Canada
Master of Computer Science

Jan 2022 – Aug 2023
GPA: 8.94/10.0

Gujarat Technological University
B.E. in Computer Engineering

2017 – 2021
GPA: 9.37/10.0

Projects

Hunger Games Harness | Python, Strands SDK, ChromaDB, FastAPI, React, Docker, LLMs

2025

- Built an autonomous AI pentesting framework where multiple LLM agents (Claude, GPT, DeepSeek) compete inside isolated Kali Linux Docker sandboxes to find and exploit vulnerabilities in real targets.
- Implemented multi-agent orchestration via Strands SDK with ChromaDB vector memory, SequentialToolExecutor, and a FastAPI + React observability dashboard; built end-to-end in under 48 hours.

SettleOut | React Native, Node.js, AWS, Redux, Expo

2023

- Built a React Native mobile app using Node.js and AWS to help international students adapt to new environments; recognized at The Key Startup Incubator.

EBF – Network of Trust | React.js, Solidity, Linea, Bitcoin Passport

2024

- Built a decentralized trust and attestation system for verifiable transactions and identity signals; **Top 15 Finalist at ETH Denver 2024**.

Achievements

- **TrendAI Hackathon (2025)** — Special Award #1 for “Hunger Games Harness,” an AI-powered autonomous pentesting framework.
- **ETHDenver (2024)** — Runner Up, Impact and Public Goods track.
- **AgTech 24-Hour Hackathon (2023)** — Winner for “UpCrops” AgriTech solution.
- **The Key Student Business Incubator (2023)** — Winner for “SettleOut” app.

Certifications

- **AWS Certified Cloud Practitioner (2024)** — Amazon Web Services
- **MongoDB Associate Developer (2023)** — MongoDB University
